

1500 amp solar generator to power home transfer switch

What is a solar automatic transfer switch?

A solar automatic transfer switch (Solar ATS) is a type of self-acting switch designed for use with a solar power system. It connects to the grid, inverter, solar battery, and the load. When battery power goes down, the solar transfer switch automatically connects your appliances to the grid.

What is a generator transfer switch?

A generator transfer switch is a permanently-installed device that allows you to safely connect your generator to your home's electrical system. It isolates your generator from the power grid, so that your home is only ever energized by one power source at a time - either the generator or the grid.

Why are manual transfer switches better for portable generators?

Manual transfer switches are less expensive than their automatic cousins and are better suited for use with portable generators. Generally speaking, you should choose a generator rated for at least 3,600 watts to connect to a transfer switch. When the power goes out, the generator is started up, then connected to the transfer switch.

Do solar inverters need a transfer switch?

While solar inverters usually come with built-in mechanisms to switch between power sources, a transfer switch is required when the solar system does not connect to the grid and needs to toggle the load between the PV system and a different source, such as a generator.

How does IGOYE solar automatic transfer switch work?

IGOYE solar automatic transfer switch has auto-switch-in and auto-restoring functions. When normal power is off, the switch will transfer to reserve power automatically, and when power is normal the switch will transfer to normal power.

Can you use an automatic transfer switch on an off-grid Solar System?

Yes, you can use an automatic transfer switch for off-grid solar systems. This is particularly useful in remote locations where running a utility line is not feasible, or in RVs when connecting to shore power or a generator.
