

1995 civic del sol power to fuel pump ignition

What's in a 1995 Honda Civic del Sol SI wiring diagram?

1.5L Honda Civic Del Sol Si: 1993,1994,1995. NOTE: The above wiring diagram applies to the 1993,1994,and 1995 1.5L Honda Civic. It includes the following circuits: Igniter (ignition control module). Ignition coil. TDC sensor. CYP sensor. CKP sensor. You can very easily test the igniter (ignition control module) and the ignition coil.

Why does my Honda Civic (Civic del Sol) crank but not start?

Quite a few things can cause your 1.6L Honda Civic (Civic del Sol) to Crank but Not Start. For example: a bad fuel pump,a bad igniter (ignition control module),a bad ignition coil,a busted timing beltand the list goes on. The good news is that troubleshooting the no-start condition of your Honda Civic is not that difficult.

Why is my 1.6L Honda Civic no start?

This is usually due to a bad starter motor,bad ignition switch,bad neutral safety switch,or the engine is locked up. The key to troubleshooting the no-start condition of your 1.6L Honda Civic,is to know that the engine needs 3 things to start and run. These are: Air. Fuel. Spark.

How do you connect a fuel pump to a relay?

To connect a fuel pump to a relay, follow these steps: 1) Unplug the main relay and then turn the key from off to ON (II). 2) Use a jumper wire or paperclip to connect terminal 5 to terminal 7 in the main relay plug. If the fuel pump runs, then the relay is working properly.

Why does my fuel pump kick on when I run a wire?

When you run a wire from the battery to the fuel pump and it kicks on, it indicates that the fuel pump is receiving power. This test tells you whether the main relay gets voltage from fuses 31 and 24. Not getting voltage from those two fuses could cause the problem you are having.

You said you bought a new pump, filter and relay, get a voltmeter or agitator and test each of the wires, if your not getting power to it then its probably a hot wire coming from your battery ...
