

What battery do I need for a 40 watt solar panel?

The 40-watt solar panel can only add 16Ah to the battery bank,so if you're using a Lead-acid or AGM small 12v battery you'll need a 30Ah battery. But,I would recommend a 50Ah battery but for lithium-ion a 20Ah battery will be a best suit

How many amps does a 40 watt solar panel produce?

To calculate the value of amps or current use this formula (Amps = Watt/Volts) Under ideal sunlight conditions,a 12v 40W solar panel will produce 3.33 amps,2.2 amps,and 40-watt voltage output will depend on the intensity of the sun so which means it will fluctuate a lot so does the current.
