

# 55eg9100 solid power light not coming on

Why does my LG TV not power on?

If your LG TV doesn't power on, first check the color of the standby light on the TV. The standby light might be located on the bottom center or bottom corners of your LG TV. When the standby light is on, it has two colors.

What happens to the power standby lamp when the TV is off?

Out of the box, the power standby lamp at the bottom of the TV lights up when the TV is off. When the TV is operating normally, this can be turned off in the TV's settings menu.

Why is my LG OLED TV not turning on?

If your LG OLED TV fails to power up, it could be due to issues with the power supply, a faulty power cord, or software glitches. This article will help you diagnose and fix the issue by exploring common causes and providing step-by-step instructions.

What does a green standby light on an LG TV indicate?

The color of the standby light can change based on the mode the TV is in. For example, a red light can indicate the device is turned off but plugged in, while a green light could indicate that the TV is on. However, if the standby light is turned off, it means that your LG TV is not getting power at all.

How can I tell if my TV is in power standby mode?

In power standby mode, the power standby lamp at the bottom of the TV lights up. If the power standby lamp is OFF, check the power cord. Out of the box, the red standby light is ON when the TV is OFF. When the TV is operating normally, this can be turned off in the TV's settings menu.

How long should I perform a power reset on my LG OLED TV?
