

What is 8+4 pin CPU power connector?

The 8+4 pin CPU power connector is a type of power connector used to supply power to the central processing unit (CPU) of a computer. The 8+4 pin CPU power connector is a 12-pin connector that consists of two 8-pin connectors that are joined together by a 4-pin connector. 1. What is an 8+4 pin CPU power connector?

Can a 4 pin CPU connect to a 8 pin CPU?

Must be one beefy board. Anyway, if you have two 8 pin CPU power connectors, the 8 pin will work just fine in the 4 pin slot. The 4 pin part of the 8 pin connector is physically and electrically the same as the 4 pin connector, with the only difference here being the additional 4 pins just hang over the port and plug into nothing.

What is the difference between 8-pin and 4-pin power connectors?

The 8-pin goes to the left CPU power connector and the 4-pin goes to the right half of the right CPU power connector. I did this, and everything works, it boots, etc. What are the limitations of this? Is there a current-draw or watt-limiting or OC-related issue from having 12-pins altogether connected instead of all 16?

Can a 4+4 connector be split into 8 pins?

One was 8-pin and one was two 4-pin connectors together. The 8-pin went in just fine, but the 4+4 pin connector did not match up. According to the motherboard manual, in this scenario, it's okay to split the 4+4 into a single 4-pin. The 8-pin goes to the left CPU power connector and the 4-pin goes to the right half of the right CPU power connector.

How safe is the 8+4 pin CPU power connector?

The 8+4 pin CPU power connector has a number of safety features to protect the CPU and the rest of the system. These features include: Overcurrent protection: The 8+4 pin CPU power connector has overcurrent protection to prevent the CPU from being damaged by excessive current.

How many watts does an 8 pin CPU use?

Each 8 pin connector can give over 300 watts to the processor, which consumes up to around 160 watts during normal use. Even overclocked, you're not gonna get close to 300w, so the extra 4 pin connector is really not needed unless you use carbon ice or nitrogen or some other heavy overclocking. Plug the 8-pin psu side cable into a 4+4 CPU socket.
