Advantages and disadvantages of solar power pdf

Why is solar energy important?

The use of solar energy contributes best of all to inhabitants meeting the energy needs of their own household by an energy supply without sources of energy free of emission(i.e.,renewed sources of energy).

Is there a problem with solar energy supply?

In the systems feeding into the network there is no such problem. The most serious problem of solar energy supply is that at night there is no available energy and in winter only a relatively low quantity of solar energy is available.

What are the disadvantages of a solar cell system?

The installation of solar cell systems was begun in areas where there was no electric network (Kacz and Nem? enyi 1998). The serious disadvantage of the island-like installation is that the storage of surplus energy quantity produced in summer cannot be solved in the long run, whereas in winter solar energy supply systems are often undersized.

What are the disadvantages of an island-like Solar System?

The serious disadvantage of the island-like installation is that the storage of surplus energy quantity produced in summer cannot be solved in the long run, whereas in winter solar energy supply systems are often undersized. In the systems feeding into the network there is no such problem.

Why is solar energy important for agriculture?

The drying of cropswith solar energy means a remarkable proportion in the whole energy utilization of agriculture according to Sembery (1990). Hot water has been produced in holiday cottages and weekend-houses for taking a bath for a long time.

Can solar energy be used for water heating?

The same can also be said about solar energy. The use of solar energy for water heating, taking a bath or a shower, and drying crops has had a tradition for a long time. The origin of the kinds of energy called "renewed" traces back to solar radiation. However, only a certain part of solar energy can be used.
