

What is solar power in Alberta?

In Alberta, solar power, also known as Solar Photovoltaic (PV), is the most common form of microgeneration. This technology allows you to harness the power of the sun to generate electricity, which you can use to meet your own energy needs, with any excess electricity being sent back to the grid. Introduction: Why Go Solar in Alberta?

Can you install solar panels in Alberta?

In Alberta, homeowners are permitted to install solar modules capable of producing up to 110% of their annual energy usage. This usage can be determined from the properties power bills, or via a third party authorization with the wire provider to assess the home interval data.

Is Alberta a good place to invest in solar energy?

Alberta is quickly becoming one of Canada's leading provinces for solar energy. With some of the highest sunlight hours in the country, an evolving energy market, and a growing number of financial incentives, there has never been a better time to consider solar power.

Does Alberta have a solar program?

Unfortunately, the large Energy Efficiency Alberta Residential and Commercial Solar Program is no longer available. However, several regional incentives exist for Albertan homeowners: Note that all provinces also have access to the Federal Greener Homes Rebate of up to \$5,000. This could reduce the cost of a 7.84kW system from \$23,285 to \$18,285.

Can you sell excess solar power in Alberta?

Selling Excess Solar Power: Understanding Net Metering One of the biggest benefits of going solar in Alberta is the ability to sell excess electricity back to the grid through net metering. This allows homeowners to maximize their savings by earning credits on their electricity bills when their solar system produces more energy than they use.

How much does solar cost in Alberta?

It allows projects of different scale to be compared easily, or for quotes to be compared between different solar installers. The average \$/Watt for roof mounted solar installed in Alberta ranges from \$2.50-\$3.50/Watt. In Alberta, homeowners are permitted to install solar modules capable of producing up to 110% of their annual energy usage.

Alberta offers a wide range of provincial solar incentives including: On-Farm Solar Program: . Designed to reduce carbon emissions in the agricultural sector, this program offers an incentive of up to \$.60 per installed watt up to 25% of ...
