

How clean is the world's electricity?

Clean power provided 40% of the world's electricity last year for the first time since the 1940s, new figures show. Clean energy comes from nuclear and renewable sources like wind and solar. The milestone has been reached thanks to the "staggering" rise of solar, which has doubled in just three years, energy thinktank Ember said in its new report.

How many homes can solar power in the US provide energy to?

The Department of Energy (DOE) reports that the United States has about 110.1 gigawatts (GW) of installed solar power capacity to date--enough to provide clean energy to about 20 million homes. According to the Solar Energy Industries Association (SEIA), solar capacity grew about 24% annually over the past decade.

What is solar energy?

Solar energy is energy from the sun that we capture with various technologies, including solar panels. There are two main types of solar energy: photovoltaic and thermal. The "photovoltaic effect" is the mechanism by which solar panels harness the sun's energy to generate electricity. Want to take advantage of solar energy yourself?

Where can solar power be generated?

Any point where sunlight hits the surface of the earth is a potential location to generate solar power. Solar energy is a clean, inexpensive, renewable power source that we can harness nearly everywhere in the world.

How much solar power does the United States have?

As of today, the United States has about 110.1 gigawatts (GW) of installed solar power capacity. This is enough to provide clean energy to about 20 million homes, according to the Department of Energy (DOE). The Solar Energy Industries Association (SEIA) reports that solar capacity has grown about 24% annually over the past decade.

What are the main types of solar energy?

There are two main types of solar energy: photovoltaic and thermal. The 'photovoltaic effect' is the mechanism by which solar panels harness the sun's energy to generate electricity. Additionally, solar thermal systems use the sun's heat to generate power. Want to take advantage of solar energy yourself? Join the EnergySage Marketplace to compare solar quotes for your property.
