

What are solar rebates & incentives?

Rebates and incentives are a crucial way to encourage broader adoption of solar energy and full home electrification across the country. These incentives will typically come from your utility, state government, or the federal government in the form of tax credits, property tax abatements, one-time rebates, or performance-based rebates.

What incentives are available for solar energy installation?

Homeowners can combine tax breaks with cash-back rebates offered by governments, manufacturers, and installers to lower the cost of purchasing and installing a new solar system. Additionally, there are performance-based incentives, where money is paid in exchange for solar energy production.

How do solar incentives work?

Lowering the cost of going solar helps more people in your community go solar, which supports clean air, a more resilient energy grid, lower energy prices, and lower fossil fuel emissions. Related: Solar Rebates by State
The concept of solar incentives is simple: Reduce the cost of solar to make clean energy accessible to more people.

What are the best solar incentives in the US?

Rounding out our list of the best solar incentives in the U.S. is South Carolina. The Palmetto State has an outstanding state tax incentive in addition to the federal one, a strong net metering policy and some local perks. We'll explain each of the solar incentives available in SC briefly below.

Are solar incentives a good idea?

Solar incentives are subject to change -- check with your local authorities for the most up-to-date information. Tax credits for solar installations have historically benefited higher-income homeowners. Rebates and feed-in tariffs, on the other hand, have the potential to make solar power more accessible for everyone.

What are the most common solar tax incentives?

These are the most common solar incentives in the U.S.: The federal solar tax credit, or investment tax credit (ITC) allows taxpayers to claim a percentage of the total installation cost of a home solar project on their federal income taxes. It's been around since 2005 at 30% with a tiered system that would decrease over time.
