Can a solar attic fan operate without sunlight?

A solar attic fan will not work without the solar energy from the sun. Therefore, on days without sunshine or with cloud cover, dust, or shade trees, the fan may not operate. 12 facts about attic fans and their solar counterparts that you need to know at Spheral Solar.

Is solar power safer than an attic fan?

Using solar power is safer to use with an attic fan, as solar power is generally considered safer than line power. However, the safety and effectiveness of an attic fan is a subject that is hotly debated. Line-powered products, such as attic fans, usually cost more to operate than they can produce in savings during the summer. They also create zones of negative pressure that could pull the AC-cooled air into the attic.

Are solar attic fans quiet?

Solar attic fans are almost silent compared to the noise of powered ones. There is no need to hire an electrician to wire a solar attic fan into your home since a solar attic fan's power comes from the sun. Electric fans, on the other hand, have been known to burn out and even become fire hazards as mentioned in this great video by HomeShowRadio.

Can a solar attic fan help save money?

A solar attic fan can indeed help save money. Solar power used by the solar attic fan is not only free but can help reduce your utility bills by pushing hot air out of your attic. This is because the fan uses photovoltaic power, a renewable energy source that also helps reduce your carbon footprint.
