

Is solar power a symbol of American energy dominance?

As Donald Trump rages against renewable energy, solar power is being reimagined as a symbol of American "energy dominance." This story originally appeared on Grist and is part of the Climate Desk collaboration. Seamus Fitzgerald hears a lot of opinions about solar power.

Does Trump talk about solar energy?

It echoes the way that President Donald Trump talks about energy, though he's usually heaping praise on American oil and gas, not renewables. Still, the Solar Energy Industries Association, the industry's primary lobbying group, has found plenty of ways to align its work with the administration's talking points.

What does the group's website claim about solar energy?

The group's website says solar requires too much land for "unreliable energy", ignoring data showing power grids can run dependably on lots of renewables. Analysts who follow the industry say Citizens for Responsible Solar stokes opposition to solar projects by spreading misinformation online about health and environmental risks.

Do landowners want solar power?

Seamus Fitzgerald hears a lot of opinions about solar power. As the associate director of real estate at OneEnergy Renewables, a solar energy developer, he approaches farmers and other landowners across the Midwest with proposals to lease their properties for solar projects. Some landowners are excited about being part of the shift to clean energy.

Will big power plants increase solar power in America?

The U.S. Energy Information Administration expects that the amount of solar capacity added in America this year from big power plants will be more than double the current annual record. All that growth means local land-use fights will keep flaring up.

How does citizens for responsible solar Stoke opposition to solar projects?

Analysts who follow the industry say Citizens for Responsible Solar opposes solar projects by spreading misinformation online about health and environmental risks. The group's website claims solar requires too much land for 'unreliable energy', ignoring data showing power grids can run dependably on lots of renewables.
