Anyway for solid fuel containers ksp

What is configurable containers in Kerbal Space Program?

Configurable Containers converts all stock fuel tanksand other containers so that in Editor you can repartition them and change their resources. Then in flight you can also change resources within predefined sets if a tank is empty. This mod is not known to work with the latest version of Kerbal Space Program. Proceed with caution.

What is a fuel tank & resource container mod?

Proceed with caution. This mod converts fuel tanks and resource containers so that you can change the resource (s) they hold in Editor and in Flight. Configurable Containers support many part packs and mods: ...more will come. ...more will come. Tank Type is a set of resources that, gamewise, have something in common.

Will this mod work with Kerbal Space Program?

This mod is not known to workwith the latest version of Kerbal Space Program. Proceed with caution. This mod converts fuel tanks and resource containers so that you can change the resource (s) they hold in Editor and in Flight.

What is the difference between cc and KSP?

The only restriction imposed by KSP is that a part cannot have two identical resources stored. So if you have two containers for liquid chemicals in a part,only one of them can hold Liquid Fuel. Compound containers have a dedicated user interface so as not to clutter part menu: CC is a part of the AT_Utils framework.

What is solid fuel?

This article is a stub. You can help KSP Wiki by expanding it. Solid fuel is a resource contained in and used by solid rocket boosters. Unlike other resources,it can't be replenished,transferred between parts,or routed throughout a vessel.

What is solid fuel in a rocket?

Solid fuel is a resource contained in and used by solid rocket boosters. Unlike other resources,it can't be replenished,transferred between parts,or routed throughout a vessel. Solid fuel is only ever found inside solid rocket parts,and it can only be used by activating the part and allowing it to consume its entire supply.

Solid fuel is a resource contained in and used by solid rocket boosters. Unlike other resources, it can"t be replenished, transferred between parts, or routed throughout a vessel. ...

If I"m understanding correctly, your issue is that you"re running out of fuel before you finish doing whatever-it-is that you"re planning for your mission? If so, you"ve come to the ...
