

Appalachian power customers can now enroll in solar program

How will a shared solar Bill affect the Dominion & Appalachian Power Company?

This year's bills would increase the number of projects allowable under the shared solar program in Dominion territory, and also add measures that could lower the minimum charge. A separate bill would create a shared solar program in Appalachian Power Company territory throughout Southwest Virginia.

Why does Appalachian Power have a minimum solar Bill?

Appalachian Power is "pleased" with the bill, utility spokeswoman Teresa Hall stated, adding the cost shifting was a concern for the company. "The minimum bill is critical to ensure that shared solar participants pay for their share of the grid, so that these costs aren't shifted to other ratepayers," said Hall.

Will shared solar expand public access in Virginia?

Two bills that would expand the public's access to shared solar in Virginia are awaiting a signature from Republican Gov. Glenn Youngkin. Shared solar is a program in which solar developers allow people who may be unable to install solar panels on their property to pay a subscription fee to receive energy from their facility.

What is the difference between Appalachian Power and APCO?

There will be a minimum bill in the Appalachian Power program, the amount of which the SCC will have to determine as it does with the Dominion program, while including the new calculations. But one difference with the APCo program is that low-income customers are not exempt from that cost and will instead receive a 10% discount.

Do solar panels need to be shut off in Virginia?

Shutoff requirements are standard for solar installations, and systems in Virginia use a device called an "inverter." The program is designed for renters or people with lots of tree cover and no rooftop panels.

Can you lease solar panels in Virginia?

Another solar-related measure that is now in effect, sponsored by Del. Rodney Willett (D-Henrico), clears up Virginia law by explicitly allowing customers to lease solar panels. Leased panels don't come with upfront installation costs -- instead, they're paid for in fixed monthly payments.
