

Does Apple use solar energy?

Apple began building and investing in large-scale solar and wind farms to power its data centers and offices over a decade ago. In 2015, the company started working with its manufacturing partners to help them create and invest in their own solar and wind projects, and source renewable energy for all Apple production.

Are Apple Watch batteries recycled?

Apple has taken steps to make its products more environmentally friendly. The company's first use of 100 percent recycled cobalt in the battery can be found in the iPhone 15, Apple Watch Series 9, and Apple Watch Ultra 2.

When did Apple start investing in solar and wind farms?

Apple began building and investing in large-scale solar and wind farms to power its data centers and offices over a decade ago. In 2015, the company started working with its manufacturing partners to help them create and invest in their own solar and wind projects, and source renewable energy for all Apple production.

Does Apple use renewable electricity?

Since 2018, all of Apple's corporate offices, data centers, and retail stores worldwide have been powered by renewable electricity.

Can I use grid forecast on my Apple Watch?

In the contiguous United States, Grid Forecast is available in the Home app on iPhone, iPad, Mac, and Apple Watch, and can be added as an iOS widget or a watch face complication. As additional data becomes available through ongoing industry collaboration, Apple will continue refining Grid Forecast to maximize impact.

Does the new Apple Watch have a 'finewoven' material?

The new Apple Watch lineups advance progress toward the company's 2025 targets for the use of 100 percent recycled metals in key components. The new FineWoven material has significantly lower emissions compared to the more carbon-intensive leather.
