

How do I choose a APS Solar Plan?

The APS Solar Rate Plans define Winter as November through April and Summer as May through October. Usage charges are higher in the Summer. Choosing the right plan after going solar depends on what APS Plan you had before solar and your habits of using energy in your home. For more information on this topic, see our page on APS Plans Before Solar.

Will I get an APS bill if I install solar panels?

Yes, you will still get an APS bill if you install solar panels. APS credits excess energy at a rate lower than the retail rate, which means it will not fully cover the costs of future energy usage. There may also be fees and charges that cannot be offset by solar.

What is the difference between APS and fixed energy charge?

Many customers are on the Fixed Energy Charge Plan before going solar, which is an APS Plan that has a flat usage charge at all times. After solar, there are two plans to choose from, and they are both Time-of-Use plans. On these plans, usage charges are different depending on the time of day and day of the week.

How long does APS metering take?

APS credits excess solar energy at \$0.076 per kWh, which is lower than the retail rate of electricity. APS requires solar homeowners to use Time of Use rates, which results in slightly lower solar savings. The solar interconnection process takes anywhere from one to four weeks with APS. Does Arizona Public Service offer net metering?

Does APS offer solar incentives?

APS does not offer any solar incentives and rebates to its customers. However, Arizona has a solar tax credit that equals 25% of system costs up to \$1,000. The Arizona tax credit can be used in addition to the 30% federal solar tax credit, resulting in thousands of dollars in tax savings.

Do APS customers need a time of use rate plan?

APS customers who install solar are required to use Time of Use rate plans, where the utility charges different rates depending on the time of day. Electricity is most expensive during on-peak hours (between 4 PM and 7 PM). Any other time of day is considered off-peak, and electricity rates will be lower.

APS offers a net billing program with an RCP rate of about \$0.076 per kWh for excess solar energy. TOU plans vary rates by time of day, encouraging off-peak energy use ...

APS sells this energy to other customers and credits the homeowner for sending this power to the grid known as the "buy back rate" or "solar export rate." During the application process, the homeowner can choose between either of the two ...
