

Are electric car drivers struggling to find working charging stations

Are EV charging stations faulty?

Nearly 1 in 5 charging stations in the United States are considered faulty, and electric vehicle drivers are struggling with pricing models and finding stations in "charging deserts," a new study outlines. A study from Harvard University released last week outlines the various hurdles EV drivers face with charging infrastructure across the country.

Are electric vehicles really bad?

Today, electric vehicles are largely fine; it's the charging networks that will make or break them. A J.D. Power report this past May quantified the problem: "Through the end of Q1 2023, 20.8 percent of EV drivers using public charging stations experienced charging failures or equipment malfunctions that left them unable to charge their vehicles."

Could charging an electric vehicle be better?

The experience of charging an electric vehicle in the US could be better, and a big new study is out that lists the biggest infrastructure pain points, including a failure to report broken stalls, inaccurate station status messages, aging equipment, and some habitually unreliable network providers (who go unnamed in the study, unfortunately).

Do EV charging networks really work?

Most public chargers work most of the time--but to get broad public adoption, EV charging has to be at least as reliable and pleasant as, say, gas stations. Not a very high bar, right? Today, electric vehicles are largely fine; it's the charging networks that will make or break them.

Are EV charging stations reliable?

In the Pollution Probe survey, EV drivers from other provinces expressed even more concerns about station reliability than EV owners in Ontario. For example, in British Columbia, 45 per cent agreed or strongly agreed that charging stations are often out of service. The remainder of the provinces polled even higher at 47 per cent.

Do EV charging problems fly under the radar?

The question is apparently not an easy one to answer. Some say that the problems with EV charging infrastructure fly under the radar because so many EV owners do the majority of their charging at home, not at public stations.

The UK is working on plans to create wireless charging stations, at services and car parks, and to one day offer dynamic charging, where wireless transmitters could be ...
