

Is solar energy a good idea?

Solar energy promises to convert that free fuel to energy. Even better, this energy source doesn't come at a cost in generation of greenhouse gases. Developing solar energy may seem like a no-brainer, but there are some legitimate concerns about the capabilities of solar energy and its practical implementation.

Can we make solar energy economical'?

We could question growth in energy production, economy, and population. All of these initiatives are left under-represented as we unwittingly rush to celebrate energy firms who are building the next round of ecological disaster machines. One of the Grand Challenges for Engineering is to 'make solar energy economical'.

How does citizens for responsible solar Stoke opposition to solar projects?

Analysts who follow the industry say Citizens for Responsible Solar opposes solar projects by spreading misinformation online about health and environmental risks. The group's website claims solar requires too much land for 'unreliable energy', ignoring data showing power grids can run dependably on lots of renewables.

Should we adopt solar energy immediately?

One of the strongest arguments for not adopting solar energy immediately is that the cost is still too high. Although there are different ways for calculating costs, and the alternative methods don't compare easily with one another, photovoltaic solar arrays are still more expensive than conventional energy sources.

What does the group's website claim about solar energy?

The group's website says solar requires too much land for "unreliable energy", ignoring data showing power grids can run dependably on lots of renewables. Analysts who follow the industry say Citizens for Responsible Solar stokes opposition to solar projects by spreading misinformation online about health and environmental risks.

Why do people oppose solar projects?
