

How does BASF contribute to thermal energy production?

This technology makes it easy to store thermal energy - enabling the production of energy even when the sun is not shining. BASF contributes to this technology through the production and supply of salts used for heat storage and heat transfer.

How can BASF help concentrating solar power plants?

More efficiency for concentrated solar power plants thanks to new BASF simulation tool. BASF has developed a new software solution to help with challenges at CSP plants.

When did BASF start a solar power plant?

In 2022, BASF and enviaM inaugurated a solar power plant in Schwarzheide. With an expected electricity production of 25 gigawatt hours (GWh) per year, the plant is the first major solar power plant worldwide that BASF realized with a partner.

How much electricity does BASF produce a year?

With an expected electricity production of 25 gigawatt hours (GWh) per year, the plant is the first major solar power plant worldwide that BASF realized with a partner. On an annual average, the solar park will cover about 10 percent of the current electricity demand of the BASF production site in Schwarzheide.

Does BASF have a solar park?

that BASF aims to reduce its greenhouse gas emissions by 25% by the year 2030 and achieve net-zero emissions by 2050. Replacing fossil-based electricity with renewable electricity is an important lever to further bring down emissions. ...that BASF owns a solar park in Germany? In 2022, BASF and enviaM inaugurated a solar power plant in Schwarzheide.

Does BASF use wind energy?

And we use wind energy ourselves at BASF: We have partnered with other companies to build one of the largest offshore wind farms in the world. Wind energy is widely recognized as a clean and renewable energy source. BASF performance materials help power up wind parks.

Novatec Solar and BASF have successfully commissioned a solar thermal demonstration plant based on a new type of molten salt technology, known as direct molten ...

: ,????DIN? ...

Frenell GmbH, Novatec Solar and BASF have successfully commissioned a solar thermal demonstration plant based on a new type of molten ... Novatec Solar and BASF start operations of solar thermal demonstration ...

For several years BASF has been researching and developing heat transfer fluids based on inorganic salts and

process control concepts for solar thermal power plants. The ...

The 700 MW combines both central tower and parabolic trough concentrated solar power (CSP) technologies, like the 550 MW NOOR I, II, and III in Morocco (Noor means "light" in Arabic). ... Advancements, challenges, and ...

The company has addressed these difficulties with its award-winning thermal energy storage and off-grid solar integration. Thermal energy storage uses cooling in the form of ice to store energy for later use. It requires 6 - 8 ...

"The successful commissioning and the initial results of the DMS demo plant have confirmed our expectations of the technology," said Andreas Wittke, CEO of Novatec Solar. "We are delighted that we can now offer solar thermal power ...

BASF salts and services for concentrated solar power industry. Extensive experience and cutting-edge innovation: when you join forces with BASF, you get the best of both worlds. Not only are ...

Not only are you are guaranteed exceptionally pure products for concentrated solar power (CSP) heat transfer and thermal energy storage processes. You can also tap into a wealth of ...

Molten salt, which is produced by companies such as BASF, is being used in concentrating solar power plants to provide efficient thermal energy storage and is part of the overall solution to the question of the viability of ...

Taking the efficiency of solar power to new heights - BASF is an innovative systems supplier of heat transfer and thermal energy storage media, designed to increase the competitiveness of ...

To achieve this goal, the project operator is relying on state-of-the-art concentrated solar power plants: a solar tower power plant, three parabolic reflector power plants and a solar power ...

Solar energy is playing an increasingly important role in power supplies throughout the globe. We offer exceptionally pure products for concentrated solar power heat transfer and thermal ...

These segments include industrial and commercial rooftops, utility scale PV power plants, residential roofing and concentrated thermal solar power (CSP) plants which utilize a ...

With an expected electricity production of 25 gigawatt hours (GWh) per year, the plant is the first major solar power plant worldwide that BASF realized with a partner. On an annual average, ...

FLORHAM PARK, NJ, September 11, 2012 -- BASF will showcase its portfolio of innovative products and solutions for the solar industry at Solar Power International 12, September 11 ...

BASF will showcase its portfolio of innovative products and solutions for the solar industry at Solar Power International 12, September 11-13, at the Orange County Convention ...

The CSP plant is located on the site of the solar-thermal power plant PE1 in southern Spain. The innovative feature of the new plant design is that the solar collector uses inorganic molten salt ...

Molten salt, which is produced by companies such as BASF, is being used in solar power plants to provide efficient thermal energy storage and is part of the overall solution to the question of the viability of renewable energy ...

We built this eco-efficient house to demonstrate how the right thermal materials can provide affordable and low carbon solutions for buildings. The BASF house, which opened in January ...
