

Do you prefer a shielded power plant or a vulture power plant?

For combat ships I prefer shielded power plants versus more power. Still if one is in a fast maneuverable ship and has good flying skills a little more power in a combat ship works. I rolled 6-7 times on a 4A plant for a Vulture and got a 42-43% increase on it (with about 30% added heat).

What happens if a ship's power plant is disabled?

Larger power plants are able to produce more energy, while power plants with higher ratings are more efficient. In the event that a ship's Power Plant is disabled during combat, its power output is halved, but module priority control can be used to keep some important modules powered.

Is overcharged powerplant good?

Sry this sounds a bit of...nonsense :/ Overcharged will generate more heat, at least all above level 2 so you want a small base heat. Only A-class is good for this. The next is, overcharged powerplants loose integrity. Weapon fire, heat and supercruise interdictions damage modules.

Is Sol a good place to buy a house?

Sol is not the greatest place for a home because there are no missions going there (because it's a permit system), try picking one of the nearby systems. One thing sol is great at is selling metals. Daedalus has a wide variety. So running trade missions from systems outside of Sol is a great way to make money.

Do I need to Max my power plant?

Thank you all for your time. I seldom need to max my Power Plant, because a max-size A-grade Overcharged G5 Power Plant is usually overkill for any configuration. Plus it generates lots of heat, so I usually go with whatever modded PP barely does the job for my configuration.

What happens if a power plant is disabled?

Repeated strikes to a "disabled" Power Plant can potentially cause a catastrophic breach in its containment systems, which can destroy a ship regardless of its remaining hull integrity.

Armoured Power Plant is an engineer modification that can be applied to Power Plants. It increases integrity, at the cost of increased mass. It is available in 5 grades, with the ...

The Sol system is notable as the birthplace of humanity and the capital of the Federation, one of the galaxy's three superpowers. Mars, which was terraformed in 2286, is the primary residence of the Federal president, and the ...
