

How to buy a charging station for electric vehicles?

Before purchasing a charging station for electric vehicles, it is essential to consider: The available load can be determined by checking invoices or contacting the network operator. If the load capacity needs to be increased, check the requirements of the grid operator.

What is a charging station?

A charging station, also known as a charge point or electric vehicle supply equipment (EVSE), is a power supply device that supplies electrical power for recharging plug-in electric vehicles.

Who installs the charging station?

An electrician, typically recommended by your service provider, can complete the installation of the electric vehicle charging station. This process may involve electrical panel upgrades or installations, installing the charging station(s), and connecting the charging station(s) to the electrical panel(s). In some instances, your electric utility provider may need to get involved.

How does a car charging station work?

A car charging station acts as the point of transfer from the grid to your vehicle. However, almost all the charging process is actually performed inside the vehicle's onboard charger.

How much does a car charging station cost?

The cost for a single car charging station from a service provider ranges from \$1,200 to \$2,500. Many service providers offer stations with two charging cables, allowing two vehicles to be charged at the same time.

How to choose an EV charging station?

The electrical panel in your house does have some limitations. So make sure to check the power panel capabilities before buying a charging station for your Home. Let us show you how this can affect your choice of an EV charging station. The go-e Chargers, for example, consume 6-32 amps, depending on the variant.
