So main steps of this sole construction: -You should flatten the shoe bottom with a cork filler and make the entire surface smooth - Make a pattern of the sole following the edge of the lasted upper plus an extra 7-8mm -Cut out leather (sole bend) using this pattern

How to make a leather sole?

To make this sole type you need to attach a ready-made leather strip (welt) to the shoe bottom and then you need to attach the leather sole. The sole must be bigger than the shoe bottom and then extra of the sole edge we need to cut out and finish this edge to make it look smooth and shiny.

How do you make a rubber sole?

Get a scrap wooden board big enough for each sole, and at least as thick as the depth of the curve. Cut out the shape of the sole. Put the desired curve around the edge (could use a router, but probably fast with just a sander). Make the finished form slightly smaller than the sole (by the thickness of the rubber).

How do you glue a shoe sole?

Using a small brush or spatula, apply a thin and even layer of adhesive onto the bottom of the shoe sole. Make sure to cover all areas that will come into contact with the shoe upper. Avoid applying too much adhesive, as it can create a messy finish and may not bond properly.

How do you attach a shoe sole?

Carefully place the shoe sole onto the bottom of your shoe, matching it up with the edge of the upper. Use a roller or your hands to firmly press down on the sole and ensure proper adhesion. You can also use clamps or heavy books to hold the sole in place while it dries. Follow the instructions on your adhesive for drying time.

What are the different types of shoe sole making techniques?

We actually can divide most of the sole making techniques into 2 types: shoe soles with cemented construction and stitched shoe soles. Let's start first with cemented shoe soles. Shoe soles with cemented construction are soles that we attach simply with cement (contact leather glue) to the shoe bottom.
