

What is the difference between cap booster and cap recharger?

Capacitor Booster allows injecting more capacitor at demand. The module consumes cap booster charges. Each charge gives a set amount of energy. For example, Cap Booster 200 will give 200 GJ of energy. Cap Recharger reduces capacitor recharge time. The result is faster capacitor recharge.

Does Eve University give a bonus to capacitor capacity?

Mindflood Booster gives a bonus to capacitor capacity. Antipharmakon Aeolis gives a bonus to capacitor capacity. EVE University members can get full reimbursement for most of these skills, among many others, through the University skillbook program. Capacitor Management - 5% bonus to capacitor capacity per skill level.

Does Eve have a Powergrid?

Every ship in EVE has an internal generator, which provides the "powergrid" you see in the fitting window. Modules fitted onto the ship connect to the powergrid and reserve a portion of the generator output for themselves, reducing the remaining powergrid when fitted.

What is a capacitor recharge rate?

The capacitor recharge rate is a non-linear function--the rate at any given moment depends on how much energy is stored at that moment. Near zero and near full capacity, the recharge rate is very low, and it peaks at 25 percent. The important thing to remember is that the recharge rate declines dramatically once it falls below 25% of capacity.

What is capacitor recharge time?

T is capacitor recharge time. Capacitor recharge, therefore, peaks at 25%, and the advertised "Capacitor Recharge Time" is actually the time for the capacitor to go from dead empty to 98.7%, assuming no drains or boosts.

Do Eve University members get full reimbursement for skills?

EVE University members can get full reimbursement for most of these skills, among many others, through the University skillbook program. Capacitor Management - 5% bonus to capacitor capacity per skill level. Capacitor Systems Operation - 5% reduction in capacitor recharge time per skill level.
