

What is a charging station?

A charging station, also known as a charge point or electric vehicle supply equipment (EVSE), is a power supply device that supplies electrical power for recharging plug-in electric vehicles.

How does a car charging station work?

A car charging station acts as the point of transfer from the grid to your vehicle. However, almost all the charging process is actually performed inside the vehicle's onboard charger.

How much does a car charging station cost?

The cost for a single car charging station from a service provider ranges from \$1,200 to \$2,500. Many service providers offer stations with two charging cables, allowing two vehicles to be charged at the same time.

How does a climate charging station work?

Thanks to the innovative hydraulic circuit, this ultra-modern climate charging station is able to manage two different gases without any contact between them. This allows the machine to be used with two cars and with two different gases at the same time, with a considerable saving of time and resources.

What is a wheeled recharging station?

Wheeled station for recharging car air conditioners with the possibility of simultaneous use (Dualgas). Leakage control with alarm. Thanks to the innovative hydraulic circuit, this ultra-modern climate charging station is able to manage two different gases without any contact between them.
