

What are EV charging stations?

EV charging stations are infrastructure built to set up charging points for Electric Vehicles (EVs) at various public places and customers' residences.

Should dealerships install EV charging infrastructure?

In fact, most auto manufacturers are requiring dealers to install EV charging infrastructure before they agree to ship inventory at all. Some dealership owners may think adding the minimum infrastructure to meet automakers' requirements is the way to go.

Should EV charging stations be available in public garages?

EV charging stations in a public garage can attract EV drivers and provide cashflow to offset the extra energy use. They are a value-added amenity for employees, residents, and traveling guests who drive electric vehicles.

How do EV charging stations in Ireland work?

EV Charging Stations Ireland install, test and maintain a dedicated power source at your chosen location for your electric vehicle. Each installation is certified and includes all the paperwork required by the grant authorities and the ESB. Our team of installers are all fully trained and qualified electricians.

Why should EV charging stations be available in short-term parking locations?

EV charging stations should be located in short-term parking areas because the average EV charging session is around 30 minutes. Offering charging stations at retail or dining centers allows a captive customer to shop or dine, perhaps for a little longer, while their EV battery gets topped up.

Are auto dealerships stalling on EVs?

Auto dealerships, however, are stalling in that many don't have the charging infrastructure to support bringing EVs onto the lot nor the expertise to sell them. And now automakers are reluctant to send their limited supply of EVs to dealers who are not set up to receive them.

Dealers definitely need to have charging stations, but every town along every highway should have at least two charging options, if not more. That way, when the dealer is closed, nobody gets stranded.
