

Is CATL developing M3P batteries with Tesla?

CNEVPost says CATL is in the process of developing and validating its M3P batteries with Tesla. Detailed analysis indicates that M3P brings better range than Iron LFP batteries for similar cost and 15% lower cost than nickel batteries.

Will M3P batteries be used in Tesla Model Y?

Back in early August 2023, local media outlet LatePost issued a report stating that M3P batteries would be used in the Tesla Model Y. A few weeks later, Sina Tech claimed that Tesla would use M3P batteries for the Model 3, which would reportedly provide the all-electric sedan with a range improvement of about 10%.

Will Tesla use M3P battery for Model 3 RWD?

The Tesla Model 3 Project Highland edition might significantly increase in range thanks to Contemporary Amperex Technology Co. Limited's (CATL) M3P lithium iron phosphate (LFP) battery. Rumors in China have circulated that Tesla plans to use CATL's M3P batteries for revamped Model 3 RWD under Project Highland.

When will Tesla start supplying M3P batteries?

As early as August 2022, local media reported that CATL would begin supplying Tesla with M3P batteries. According to the information, deliveries were expected to begin in the fourth quarter of 2022 for use in the new Model Y, which was expected to go on sale in early 2023.

What type of battery is Tesla getting from CATL?

The mysterious new Tesla order to the world's largest electric vehicle battery manufacturer CATL turned out to be not of its novel Kirin batteries, but of LFP packs. Not your regular LFP battery, though, rather a greatly improved chemistry with higher density slated for the Model Y.

When will CATL's new M3P battery come out?

The Tesla Model Y with CATL's new M3P battery is slated to release in early 2023.

Local media reports from China have suggested that Contemporary Amperex Technology Co. Limited (CATL) is currently in the process of developing and validating its M3P batteries with electric...

CATL is working with Tesla to develop a fast-charging LFP battery pack for the upcoming next-generation EVs, including the robotaxi Tesla is working on

The world's largest battery manufacturer CATL is to begin production of its M3P batteries, which are 15 per cent more energy dense than LFP (Lithium iron phosphate) batteries, and will perform better and cost less ...

Il debutto delle batterie M3P di CATL sulle vetture Tesla costruite nella fabbrica di Shanghai sembra avvicinarsi a grandi passi. A tornare sull'argomento, dopo i rumors dello scorso mese, è Zeng Yuqun in

persona, ceo e fondatore di ...

CATL said the M3P battery will go into mass production and use in 2023. During 2022, there were reports that the new battery would be installed in the Tesla line-up in China, including the new Model Y, but no announcement verifying these statements came last year. However, the M3P battery debuted with the Luxeed S7, produced by Chery and ...

Contemporary Amperex Technology Co. Limited (CATL) is reportedly developing and validating M3P batteries in collaboration with electric vehicle manufacturer Tesla.

CATL will sell Tesla its novel M3P battery technology, according to Notebook Check. It will be installed in Tesla Model Y vehicles in the fourth quarter of 2022. So Tesla is ditching their 4680 ...
