

What is a CATL Qilin battery?

CATL unveiled its 3.0 CTP (cell-to-pack) Qilin battery back in 2022 and on paper, its specs look impressive. The battery production reportedly achieved the level required for reliable distribution, which means the first cars with the 1,000 km battery are about to hit the market.

How much energy does a qilin battery use?

Qilin is named after a legendary creature from China. The latest CATL post suggests that this integrated system can increase the energy density to 255Wh/kg for ternary battery systems (NMC, NMCX etc), and 160Wh/kg for LFP battery systems. Essentially removing the overheads of a module.

What is CATL Qilin?

In 2019, CATL pioneered the world's first module-less battery pack CTP, taking the lead in making the battery volume utilization rate exceed the 50% mark. Now, along with the all-round improvement of core process, core algorithm and core material, CATL redefines battery structure design with the name of Qilin.

Does Qilin battery improve energy density?

Qilin battery achieves its energy density without resorting to new chemistry, it is impressive and it shows the current technology still has a lot to improve. CATL's new battery offers a 13% improvement in energy density over Tesla's 4680 cells without resorting to an experimental production process or new materials.

What is CTP - Qilin battery?

On June 23, 2022, CATL, a leading battery company, announced the third generation of CTP (direct cell integration into battery pack technology) - Qilin Battery, which has the highest system integration in the world, 72% volume utilization rate, and 255Wh/kg energy density, enabling pure electric vehicles to achieve an entire vehicle 1000km range.

What is CATL Qilin CTP 3.0?

The CATL Qilin CTP 3.0 is their second generation cell to pack design. Qilin is named after a legendary creature from China. The latest CATL post suggests that this integrated system can increase the energy density to 255Wh/kg for ternary battery systems (NMC, NMCX etc), and 160Wh/kg for LFP battery systems.

It is worth noting that the Qilin Battery is a CATL innovation in pack structure, not in battery chemistry. This means that both ternary batteries, as well as lithium iron phosphate (LFP) batteries, can use this pack structure. ...

The Zeekr 140kWh CATL Qilin battery pack is interesting as it is an NMC chemistry in a cell to pack design. This pack is used in the 001 and 009. Specifications This post has ...

CATL develops the self-stabilizing battery system with gas-electric separation and active isolation, to achieve

both high efficiency integration and high safety of high energy density batteries, which is compatible with all ...

Last summer, we told our readers about a new battery chemistry from CATL, the world's largest maker of lithium-ion batteries. Called M3P, the new batteries are said to be up to 15% more energy ...

In addition to solving the problem of range anxiety, CTP is also able to achieve cost-effectiveness by combining different chemical systems. Through continuous technological iteration, CATL has launched the third ...

With the same chemistry system and the same pack size, the Qilin Battery delivers 13% more power compared to 4680 batteries, achieving an overall improvement in range, fast charging, safety, life, efficiency, and low ...

On April 19, CATL launched condensed battery, an innovative cutting-edge battery technology in Auto Shanghai. With an energy density of up to 500 Wh/kg, it can achieve high energy density and high level of safety at the same time in ...

The Qilin Battery allows volume utilization to exceed 72 percent and energy density to reach 255Wh/kg, supporting vehicles with a range of 1,000 kilometers, the company said at the time. It is worth noting that Qilin Battery is ...

CATL and ZEEKR announced the terms of a new five-year strategic cooperation agreement in a press release today, which will include the mass-produced supply of energy dense Qilin battery packs ...

CATL launched the Qilin Battery on June 23, 2022, which is the company's innovation in battery construction that is compatible with lithium ternary chemistry and LFP chemistry. Tesla cuts car production in China amid ...

Notably, Qilin Battery is a CATL innovation in battery pack construction, not battery chemistry. This means that this pack structure can be used for both ternary batteries as well as lithium iron phosphate (LFP) ...

CATL says that its product offers 13 percent more power than the 4680-type battery system (same cell chemistry and pack capacity), and a higher volumetric integration (72% vs 63%), as well as ...

CATL has begun mass production of Qilin Battery, report says. Chinese power battery giant CATL's Qilin Battery has achieved mass production and has a 13 percent higher capacity than 4680 batteries in the same volume, ...

On June 23, 2022, CATL officially released the CTP3.0 battery-Qilin battery. Qilin batteries are not battery cell technology, but battery system technology. This is a battery system composed of prismatic cells, the volume utilization rate has ...

CATL's new Qilin 3.0 battery for electric vehicles has caused a stir in the industry, but it is a precursor of much greater things to come. ... and especially its founder and chairperson, Robin Zeng (Z?ng Yùqún), the ...

With the same chemistry and the same pack size, the Qilin Battery delivers a 13 percent increase in power compared to the 4680 battery, providing an overall improvement in range, fast charging, safety, life, efficiency, and low ...

April 26th, 2023 Have the European battery producers completely lost touch? Chinese battery manufacturers are celebrating new product successes everywhere: The first sodium batteries (BYD, CATL, 2021) are being ...

On June 23, 2022, CATL, a leading battery company, announced the third generation of CTP (direct cell integration into battery pack technology) - Qilin Battery, which has the highest system integration in the world, 72% volume ...

The battery pack in the 2024 AVATR 12 is the CATL Qilin, a Cell to Pack design and in this case using NMC chemistry. The battery pack has a total energy of 94.5kWh and is described ...

On August 27, CATL and ZEEKR jointly announced ZEEKR as the first car brand to be powered by mass-produced Qilin batteries. ZEEKR 009 will be the world& #39;s first car with Qilin inside, and ZEEKR 001 will be the world& #39;s ...
