

Will CATL batteries replace lithium ion phosphate batteries?

Reports claim that CATL's second-generation sodium-ion batteries will replace 20 to 30 percent of lithium-ion phosphate batteries in small or short-range vehicles. In January 2024, BYD (Xuzhou) started construction of a sodium-ion battery project with an annual production capacity of 30 GWh.

Can CATL's sodium-ion battery be used for energy storage?

Finally, CATL claims the battery can also be adapted for use in larger-scale energy storage, joining a handful of other companies making commercial sodium batteries for these purposes. In addition, the Chinese giant (which supplies EV batteries for Tesla) plans to establish an industrial chain to deploy its sodium-ion battery in 2023.

Is CATL's salt-based battery good for electric transportation?

As a result, CATL is confident its new salt-based battery is well-suited to electric transportation, particularly in colder areas. On that note, lithium batteries' energy density is one of the things holding electric transportation back, particularly in aviation, and a density of 160 Wh/kg isn't going to solve that problem.

Could a salt-ion battery lead the charge?

Leveraging salt could help us avoid much of the cost and difficulty in sourcing scarcer lithium, and Chinese giant CATL is looking to lead the charge by launching its first commercial sodium-ion battery.

How does CATL's sodium ion battery work?

In their announcement, CATL gave a few details about how their sodium ion battery works. The anode is made out of hard carbon, as is commonly the case. They noted that their hard carbon anode features a "unique porous structure", which lengthens its cycle lifetime and allows for more sodium ion movement.

What is a sodium ion battery?

These form key components of the company's first commercial sodium-ion battery, which boasts some impressive performance figures. It is claimed to have an energy density of up to 160 Wh/kg, which is a far cry from the density offered by lithium batteries of up to 285 Wh/kg, but is nothing to sneeze at in the world of sodium batteries.

CATL's lithium-ion battery capacity in 2021 was 170.39 GWh, and the lithium-ion battery production lines that have been completed and put into operation will have a combined design annual capacity scale of 260 GWh to ...

Lithium is abundant, but difficult to extract and purify for use in batteries. Last year, the price of lithium carbonate peaked at over \$80,000 per ton, although it has come down considerably ...

CATL will initially roll out battery packs for EVs that combine sodium-ion and lithium-ion batteries, to compensate for the shortage of energy density. To achieve this, CATL has also developed a ...

China's CATL (300750.SZ) on Thursday became the first major automotive battery maker to unveil a sodium-ion battery, saying it planned to set up a supply chain for the new ...
