

How do you charge an EV at a gas station?

While charging an EV is different from refueling your car at a gas station, expanding infrastructure means that EV charging has never been easier. The basic steps of recharging your EV at a public station are: Pull the car up to the charger. Turn the car off. Plug in a fuel-supply cord.

How do you charge an electric vehicle?

There are three main ways to charge an electric vehicle (EV): at home, at work and via public charging points, with the latter found by the roadside and at service stations. It's important to remember, though, that public chargers offer a huge range of speeds - for a huge range of prices.

What is the difference between charging stations and EV charging stations?

One of the main differences between charging stations is how much power they can provide, which, in turn, impacts how fast they can charge your car. EV chargers are classed into three levels depending on how much power they deliver.

How do you charge a PHEV?

As with EVs, PHEVs are charged by being plugged into a power outlet. At home or in the workplace, you can plug into a domestic socket or a private charging station. But you can also charge your PHEV at public charging stations. Chargemap is your best ally when it comes to locating them both in the UK and all over Europe.
