

# Charging car batteries need eyewash stations

Do eye wash stations need to be near battery charging areas?

According to OSHA Standard 1926.441 (a) (6), such stations must be within 25 feet of the battery handling area to ensure immediate access in case of chemical exposure. To comply with OSHA regulations and ensure worker safety, eye wash stations near battery charging areas must meet specific criteria:

Do you need an eye wash station?

In areas dedicated to chemical storage, the installation of an eye wash station is a fundamental safety requirement. These locations are filled with various chemicals, each with potential hazards that can cause severe eye injuries.

Do you need an emergency shower or eye wash station?

Whether you need an emergency shower, eye wash stations, or both, ANSI/ISEA Z358.1 requires them to meet standard specifications including equipment controlling flushing fluid's velocity and quantity, and easy-to-use controls.

Where should an eye wash station be located?

In a laboratory, the eye wash station should be situated close to the areas where chemicals are handled or stored, typically within the immediate work area. This placement ensures quick access in case of a chemical splash or exposure, minimizing the time to commence flushing the eyes. What are the ANSI requirements for eye wash station?

What are the flow requirements for an eye wash station?

Eye wash stations must release flow within one second or less. ANSI/ISEA Z358.1 requires them to meet standard specifications, including: Equipment must control flushing fluid's (water or specialized solutions) velocity and quantity. Wash stations must release flow within one second or less, and controls should be easy to use.

Does OSHA require eye wash stations?

In short, OSHA does not require eye wash stations to connect with central plumbing systems -- though plumbing is often the simplest way to meet minimum flow requirements, particularly for showers.
