

What is spectrally inverted WiFi?

The following document explains this in depth: What is I/Q Data? Basically, spectrally inverted WiFi is a WiFi signal with the I and Q reversed; if you have a transmitter and a receiver both expecting this, you have an undetectable bridge (since normal WiFi chips will see noise). ***ABOUT THE LOGS ***

How do I check if a Cisco AP has an interferer?

No more than 25 interferers can be detected by a Cisco AP. Choose Wireless > Access Points > Radios > 802.11a/n or 802.11b/g/n to open the 802.11a/n (or 802.11b/g/n) Radios page. Hover your cursor over the blue drop-down arrow for the desired access point and click Detail. The 802.11a/n (or 802.11b/g/n) AP Interfaces > Detail page is displayed.

What is a WiFi Invalid Channel?

In addition, our Cisco RF engineers have confirmed the following: "WiFi Invalid Channel" is a WIFI packet that is not sent using the standard 802.11 channels, and so are invisible to normal WIFI clients, WIDS, and sniffers. This can also be achieved on any Wi-Fi chipset that the user has access to the radio command set.

What is AP & Pi?

The built-in spectrum analysis chip and software does all the classification of devices. What is sent from the AP to the wireless controller and Prime Infrastructure (PI) management system are interferer records and channel air quality metrics. AirQuality is a metric that indicates how good a channel is for WiFi communication.

How do I configure AP mode?

Choose Wireless > Access Points > All APs to open the All APs page. b. Click the name of the desired access point to open the All APs > Details page. c. Choose SE-Connect from the AP Mode drop-down list. This mode is available only for access points that are capable of supporting Cisco CleanAir functionality.

How do I find the 802.11a/n AP interface detail page?

Choose Wireless > Access Points > Radios > 802.11a/n or 802.11b/g/n to open the 802.11a/n (or 802.11b/g/n) Radios page. Hover your cursor over the blue drop-down arrow for the desired access point and click Detail. The 802.11a/n (or 802.11b/g/n) AP Interfaces > Detail page appears.

Bias-Free Language. The documentation set for this product strives to use bias-free language. For the purposes of this documentation set, bias-free is defined as language that does not imply discrimination based on age, disability, gender, racial identity, ethnic identity, sexual orientation, socioeconomic status, and

intersectionality.

Catalyst 9115 :? Catalyst 9115 Cisco DNA ,: Cisco DNA Spaces Cisco DNA ?

I've noticed this "Security-risk Interferer "WiFi Inverted" is detected by "AP" in my Cisco Prime Infrastructure. As it seems (seen in this forum ...

Cisco provides superior connectivity options, both on-premises and cloud-based, designed to support uninterrupted operations in any environment. Explore Cisco wireless. Indoor. Cisco Catalyst 9100 Access Points Get the network of the ...

Hi Guys; I am after some help in trying to identify what WiFi inverted and WiFi Invalid channel alarms are, I have read the post which gives a good explanation:

As previously mentioned, CleanAir is the integration of Cisco Spectrum Expert technology within a Cisco AP. While similarities might exist, this is a fresh use of the technology and many new concepts are presented in this ...

cisco_ap. Name of the access point to which the command applies. Command Default. The default CleanAir settings for the 802.11 a or 802.11 b/g network is disabled. ... 802.11-inv--WiFi inverted devices information. 802.11 ...

For every device operating in the unlicensed band, Cisco CleanAir provides information about what it is, how it is impacting your wireless network, and what actions you or your network should take. It simplifies RF so that you ...

Switch #show ap name Cisco_AP3500 config dot11 24ghz <snippet> CleanAir Management Information CleanAir Capable : Yes CleanAir Management ... Displays CleanAir Interferers of type WiFi Inverted for 2.4-GHz band. show ap dot11 24ghz cleanair device type jammer

Cisco Embedded Wireless Controller on Catalyst Access Points Configuration Guide, IOS XE 17.15.x ... WiFi Inverted--Device using spectrally inverted Wi-Fi signals. Jammer. ... Displays CleanAir interferers of type Wi-Fi Inverted for the 2.4-GHz band. show ap dot11 24ghz cleanair device type jammer .

Step 1: Choose Wireless > 802.11a/n or 802.11b/g/n > CleanAir to open the 802.11a (or 802.11b) > CleanAir page.. Step 2: Check the CleanAir check box to enable Cisco CleanAir functionality on the 802.11a/n or 802.11b/g/n network, or uncheck it to prevent the Cisco WLC from detecting spectrum interference. By default, this feature is in disabled state.

No more than 25 interferers can be detected by a Cisco AP. Choose Wireless > Access Points > Radios > 802.11a/n or 802.11b/g/n to open the 802.11a/n (or 802.11b/g/n) ...
