

What is the purpose of SOLAS requirements for containers?

Mandatory SOLAS requirements for containers ensure that the verified gross mass of a container is provided before it can be loaded on a ship. This is part of IMO's efforts to ensure the safe transport of containers, along with guidelines on container stowage and mandatory reporting of loss of containers.

Do I need a new SOLAS container weight verification?

The International Maritime Organization (IMO) has implemented a SOLAS amendment, or change to existing regulations, to require that containers and their contents must be weighed prior to loading. With up to 20% of TEUs shipped with an incorrect weight, the need for a revised SOLAS Container Weight Verification was clear.

How do you weigh a container under the SOLAS amendments?

Under the SOLAS amendments, there are two permissible methods for weighing: Method 1, which requires weighing the container after it has been packed, or Method 2, which requires weighing all the cargo and contents of the container and adding those weights to the container's tare weight as indicated on the door end of the container. 3.
