

Cost of installing solar power in your home

How much does it cost to install a solar panel?

(Mar 2025) Solar panels generate "free" electricity, but installing a system still costs money. A typical 8-kilowatt (kW) solar panel system costs \$22,712 before considering any financial incentives. Your energy needs determine the system size you need, which affects the overall price of your solar panel installation.

How much does a home solar system cost?

Home solar systems typically range from \$6 to \$12 per square foot of living space. The actual cost may vary based on the size and electricity consumption. These estimates are assuming the homeowner claims the 30% federal tax credit for the solar system.

How much does a 5 kilowatt solar system cost?

The average 5-kilowatt (kW) solar panel system is \$14,210 before considering any financial incentives. However, a typical American household needs a system closer to 10 kW to adequately power their home, which costs \$28,241 in 2024. That price effectively drops to \$19,873 after considering the full federal solar tax credit.

How much does solar energy cost per watt?

The cost per watt is what you pay for each unit of power of your solar energy system. Think of it a little like "price per square foot" when you buy a house. It helps compare the value of solar energy systems in different sizes. As of publishing, the average cost per watt is \$2.84.

How much does a commercial solar system cost?

Commercial solar systems entail higher costs, with many factors impacting pricing: Building size - Systems below 50 kW can cost \$50,000 to \$150,000. Large 500 kW+ systems run \$750,000 to \$1 million+. Electricity needs - Larger energy users require bigger, more expensive systems to offset usage.
