

Are Crayola products made from renewable energy?

Crayola products such as crayons, markers, paints, and modeling compounds are now being made with 100% renewable energy, according to company representatives.

How many crayons does the Crayola solar farm produce each year?

If you are looking for instructions that are not listed on this page or have a specific question please visit our support section. The Crayola solar farm provides enough power to make 1 billion Crayola crayons and 500 million markers a year!

How much energy does Crayola use?

Using the fact given by the U.S. Energy Department that .00823 of tons of carbon dioxide is equivalent to one gallon of burning gas, Crayola uses about 692588 gallons of gas in the production process, and that ignores the transportation. Therefore, the net energy input for just making a crayon is not at all cheap.

Are Crayola markers made with solar power and recycled materials?

Crayola Markers Made with Solar Power and Recycled Materials: Worth the Hype? The black end plug on these Crayola markers has been made with recycled materials; everything else is new plastic.

How many crayons has Crayola made?

Crayola has manufactured over 10 billion crayons and 7 billion markers. 10 billion crayons have been made by Crayola over the past decade.

Where are Crayola crayons made?

They make nearly 3 billion crayons each year - about thirteen million each day - right here in Lehigh Valley. In fact, about 90% of the entire world's crayons are made locally by Crayola. Crayola has been making crayons for more than 116 years and along the way they grew beyond crayons as they found innovative and fun ways to create art products.
