

What does changing color or blinking on a Dell desktop power button mean?

Dell desktop computers have a power button light (LED) that changes its status to indicate the general status of the computer. The LED can be green, yellow, or off, each signifying a different status.

How do I fix the orange light on my Dell laptop?

To fix the orange light blinking on your Dell laptop, follow these steps: After the Dell logo appears, press the boot key (F2, Esc, or other based on your model) to enter BIOS. From the left pane, expand the Security tab and go to TPM 2.0 Security. Move to the right side and check the Clear option. Now, hit the Apply button, and save the BIOS settings. Exit BIOS and see if the orange light persists.

What does a blinking orange light on a Dell laptop indicate?

A blinking orange light on a Dell laptop indicates a problem with the LCD cable or the CMOS battery. If the LCD cable is the issue, cleaning the slot and reconnecting the cable may fix it. If the CMOS battery is dying, you may have trouble booting into Windows.

What does a green power button LED indicate on a Dell desktop?

The LED on the power button of a Dell desktop can be green. When the LED is green, it indicates that the computer is powered on and running normally.

Why is my Dell laptop flashing amber and white?

An amber or orange light on a Dell laptop usually indicates power/battery issues. Alternatively, flashing amber and white means you have attached an unsupported AC adapter/battery. To solve this, simply plug in a Dell-supported charger, and ensure the laptop is receiving enough power.

What does orange light mean on a PC?

Lot's of people would also ask what computer make model style, etc. you have. Solid orange light typically means bad MB, so it's possible it's the CPU. Blinking orange would mean bad PSU. As fun as it is to do everything at once, a good rule of thumb is to install one piece at a time and see if PC works.
