

Does sterling silver have nickel?

It is worth mentioning that not all sterling silver jewelry contains nickel. Some manufacturers use alternative metals, such as zinc or palladium, to replace nickel in their sterling silver alloys. Additionally, some jewelers specialize in nickel-free sterling silver jewelry for those with nickel allergies.

What is sterling silver made of?

Sterling silver is 92.5% pure silver and 7.5% copper, with no nickel content. In this comprehensive article, we'll explore what sterling silver is made of, why nickel is sometimes mistakenly associated with sterling, how to avoid nickel exposure from sterling silver, and more.

Can a nickel-free sterling silver jewelry cause an allergic reaction?

The nickel in sterling silver is what can cause an allergic reaction, but this can be avoided by choosing nickel-free sterling silver jewelry. When looking for high-quality sterling silver jewelry that does not contain copper or nickel, it is recommended to shop from reputable retailers that use higher-quality metals.

Can you wear sterling silver if you have a nickel allergy?

Let's dive in and explore this! Although sterling silver is an alloy, most people can wear it safely because it doesn't contain nickel. Sterling silver jewelry is usually composed of 92.5% silver; the rest 7.5% is other metal alloys, most often copper. Copper is a non-reactive metal, less likely to cause an allergy.

How to avoid nickel exposure from sterling silver jewelry?

Another way to avoid nickel exposure from sterling silver jewelry is to look for nickel-free settings. Some jewelry pieces may have nickel-containing components such as clasps, earring hooks, or jump rings. By choosing jewelry with nickel-free settings, you can reduce the chances of direct contact with nickel.

Does nickel silver contain silver?

Nickel silver, also known as German silver, is a base metal alloy that does contain nickel. It is often used in the production of silver-colored utensils, musical instruments, and decorative items. Despite its name, nickel silver does not actually contain any silver, but the silver-like appearance can lead to confusion.
