

Does SRP offer a demand based plan?

SRP offers demand- and export-based plans for customers with existing rooftop solar systems or other energy-generating capabilities. Find the best fit for your lifestyle. Ideal for customers who produce some of their own energy. These plans include monthly demand charges and offer the lowest rates of all SRP residential plans.

Does SRP offer solar rebates?

SRP doesn't offer any rebates or incentives explicitly for installing solar panels. However, if you install a demand management system alongside your panels, you can receive a rebate of \$250 from SRP. While SRP doesn't have any substantial solar incentives, a state solar tax credit can be paired with the 30% federal tax credit.

What is SRP solar & how does it work?

SRP solar plans allow customers to offset a portion of their monthly energy bill by generating some of their own power. A common misconception is that rooftop solar customers won't receive an SRP bill of any kind. While that isn't true, your monthly bill can be lower with solar generation than it would be without.

Do solar panels save money on SRP?

Typically, solar customers continue to rely on SRP for around two-thirds of their electricity needs. SRP bills solar customers for the costs of providing electric service. While you may save money on your SRP bill with rooftop solar, those savings are unrelated to the cost of your solar panels.

Does SRP offer a solar tax credit?

However, if you install a demand management system alongside your panels, you can receive a rebate of \$250 from SRP. While SRP doesn't have any substantial solar incentives, a state solar tax credit can be paired with the 30% federal tax credit. The Arizona solar tax credit equals 25% of installation costs, up to \$1,000.

How much does SRP cost to install solar panels?

SRP requires its solar customers to use time of use rate plans, where electricity rates vary with the time of day and year. You can expect to pay between \$0.06 and \$0.26 per kWh for electricity during on-peak hours and \$0.05 and \$0.09 per kWh during off-peak hours if you go solar with SRP. Will I still get an SRP bill if I install solar panels?

Demand is the amount of power your home uses at any given point in time, measured in kilowatts (kW). Although related, energy measures how much power you use over a given period of time, measured in kilowatt-hours (kWh). SRP's ...
