

Why does my Dyson V10 have 3 solid blue lights?

Dyson v10 3 solid blue lights no power fix. If your Dyson V10 has solid blue lights but not power then you will often have a jam in either the rotating powerhead or a faulty battery. The rotating powerheads are designed to stop if they detect a high current draw due to a blockage or tangle.

How do I know if my Dyson V10 is fully charged?

The Dyson V10 when charging correctly has 3 LED lights on each side of the battery. These will flash depending on the level of charge required. When the battery is fully charged the 3 blue lights will go off. Sometimes you may think that the Dyson V10 is fully charged as it has no lights showing but it really is flat.

Why is my Dyson V10 not working?

If your Dyson V10 is not working after cleaning or replacing the filter then it could be a limit switch error. The problem 99 times out of 100 is because the rear HEPA filter is not screwed on correctly. Remove the filter and clean out any dust and dirt that may be trapped between the threads of the blue filter. Replace the filter and screw it on.

Why is my Dyson V10 pulsing?

If your Dyson V10 is pulsing after replacing the filter then check for blockages, tangles in the brush head, or a wet filter. These problems can cause the vacuum cleaner to pulse during operation because of extra power draw. If playback doesn't begin shortly, try restarting your device.

How do I remove a Dyson V10 battery?

There are only 3 screws that are holding in the Dyson V10 battery. Two are on the bottom and one is on the side near the hand trigger. Remove these three Philips head screws and the battery will slide right out.

Can I leave the Dyson V10 on charge all the time?

Yes, you can leave the Dyson V10 on charge all the time. The internal battery management system (BMS) is designed to cut off the charge voltage once it reaches a pre-set charge capacity. This protects the lithium-ion batteries from overcharging and overheating.
