

How many EV charging stations are there?

Tens of thousands of electric vehicle (EV) charging stations are available in the United States. These charging stations are being installed in key areas throughout the country for public charging and workplace charging as a supplement to residential charging. Most EV owners do the majority of their charging at home.

How do I find EV charging stations?

Charging the growing number of EVs in use requires a robust network of stations for both consumers and fleets. The Alternative Fueling Station Locator allows users to search for public and private charging stations.

Do electric vehicles need charging stations?

Consumers and fleets considering electric vehicles (EVs)--which include all-electric vehicles and plug-in hybrid electric vehicles (PHEVs)--need access to charging stations. For most drivers, this starts with charging at home or at fleet facilities.

What EV charging infrastructure is used in the alternative fuels data center?

The Alternative Fuels Data Center and the Station Locator use the following charging infrastructure definitions: Station Location: A station location represents a physical place with one or more EV charging ports. Examples include a parking garage or a parking lot.

How do I find a charging station near me?

To find a charging station near you, download and open the ChargeHub application. Please be sure to activate your device's location services. Then, you can consult the interactive map, which will display nearby charging stations. You can also use the map on our website to locate an available charging station.

How many EV charging stations are there in 2023?

Last year on January 2023, the numbers were as follows: 53,899 EV charging stations and 143,577 charging ports (28,623 DC sockets and 114,954 Level 1/2 ports).
