

Electric car charging station fueled by diesel

Does an electric car charging station have a diesel generator?

An Oct. 25 Instagram video ([direct link](#),[archive link](#)) shows an Australian electric vehicle charging station that includes a large blue diesel generator. "Look! It's an electric charger for an electric car, and right there that is a diesel-powered generator to run your electric charging point for your car," a narrator says.

Does EV charging rely on diesel or gas generators?

The EV charging network doesn't rely on diesel or gas generators at all. Electric vehicles have soared in popularity in recent years, offering drivers a way to get around that doesn't depend on gasoline. But some posts on social media claim those drivers are still burning fuel by using diesel generators to charge their cars.

Does an electric car charging station in Texas use diesel fuel?

A Facebook post claims an electric car charging station in Texas runs on a diesel generator and that a car has to charge for three hours and use 12 gallons of diesel fuel to travel 200 miles. The company that owns the charging station pictured in the post says the station is connected to an electrical grid and does not use diesel fuel.
