### **SOLAR** PRO. Electric vehicle mobile energy storage transmission grid

#### What is vehicle-for-grid (VFG)?

Abstract: Vehicle-for-grid (VfG) is introduced as a mobile energy storage system(ESS) in this study and its applications are investigated. Herein, VfG is referred to a specific electric vehicle merely utilised by the system operator to provide vehicle-to-grid (V2G) and grid-to-vehicle (G2V) services.

#### How ESS Technology is applied in a smart grid?

ESSs are applied in all parts of a smart grid based on different purposes. Generally, the ESS technologies applied in a smart grid fall into three main categories which are classified based on the form of the energy which is converted in them . These categories include electrochemical, electrical, and mechanical ESSs .

#### Do EVs improve grid resilience?

The findings demonstrate that the EVEN solution significantly boosts grid resilience, especially for smaller energy users, with minimal impact on battery health. The solution is most efficient when households are close to the central MG, minimizing energy loss. This research provides key insights into enhancing grid resilience using EVs.

How does a central emergency microgrid work?

The model incorporates a central emergency microgrid (MG) that can operate independently when the main grid fails, along with multiple EV-equipped households. Evaluated using a real-world scenario in Sweden, the study measures performance through metrics like energy deficit days, electricity delivery, and battery degradation.

#### What is a vehicle-to-grid (VFG)?

In fact,a VfG is a specific electric vehicleutilised by the system operator to provide vehicle-to-grid (V2G) and grid-to-vehicle (G2V) services. In this study, plural form of VfG, that is, vehicles-for-grid is indicated by VfGs, as the defined agreement.

#### What is the EV solution?

This study introduces a comprehensive model for the EVEN solution, focusing on the coordination of electricity distribution via EVs. The model incorporates a central emergency microgrid (MG) that can operate independently when the main grid fails, along with multiple EV-equipped households.
