I'm talking about the anchorable structures that come in small, medium, and possibly large sizes. Different

kinds, i.e. pulse laser batteries, "these" batteries, "those" batteries, etc. I've encountered these things anchored in wormholes, defending structures. I've also accumulated the odd BP here or there from drops or whatever else. My question is what the ...

All batteries use an ammo size one step bigger than the modules size, so small batteries use medium ammo, mediums use large, large batteries use XL ammo. You have to put the ammo in the modules themselves before you online (iirc). T1 or faction ammo is allowed. Note: T1 crystals will get used up, they are not infinite in pos batteries.

The behavior of the batteries would look somehow like this: they are invulnerable when the structure is invulnerable; they are being repaired during the vulnerability window; they are passive, until a player attacks either a battery or the citadel, then they will work as an automated defense system

The question originally came to me as I was theory crafting a C5 Anom Moros and was trying to work out the benefits from cap boosting through the usual mods to counter heavy neuting vs the defence of 2 Batteries d/reflecting 50% if the incoming cap attack. if they could provide a defence against it, rather than a counter attack, then batteries ...
