

How much do solar panels cost in Georgia?

Solar panels will save you a lot of money over time, but the upfront costs aren't cheap. The average Georgia homeowner needs a 12.06 kW solar panel system to cover their electricity needs, which comes out to \$31,645 before incentives. Prices range from \$26,898 to \$36,392, but after the federal tax credit, that drops by 30%.

How does Georgia Power's Solar Program work?

Georgia Power's Solar Program helps maximize savings by encouraging the use of solar electricity at home. This reduces the amount of electricity sent back to the grid.

How many kW is a solar system in Georgia?

Georgia Power sets the following size limits for residential and commercial solar systems: residential systems are limited to 10 kW and commercial systems to 250 kW. Georgia Power is part of the Southern Company, which is the state's largest utility.

Does Georgia Power have a solar buy back program?

Georgia Power's Solar Buy Back program offers credits for the solar electricity sent back to the grid. The best way to maximize your solar savings is to use as much of your solar electricity at home when it's produced. The credits are the same regardless of the residential rate plan that you are enrolled with.

Is Georgia a good state to install solar panels?

With higher than average electricity prices and abundant sunshine, Georgia's a pretty great state for solar energy. It may not have the best local solar incentives, but as a Georgian, you can still take advantage of solar's most valuable incentive, the Federal Tax Credit. Here's what you should know about installing solar panels in the Peach State.

What tax credits do solar panels get in Georgia?

The federal solar investment tax credit (ITC) is the biggest factor reducing the cost of going solar in Georgia. If you install a residential solar panel system by the end of 2032, you receive a federal income tax credit equal to 30% of the system's total cost. That includes equipment, labor and permits.
