

Does Georgia Power have a solar buyback program?

Georgia Power, the largest utility in the state, participates in solar buyback programs. However, applicants have experienced long waiting periods as the utility awaits more capacity and investment.

Can Georgia Power buy back electricity?

Dr. Marilyn Brown, Regents Professor at the Georgia Institute of Technology, is a champion of solar and net metering in Georgia. She acknowledged Georgia Power will be able to buy back electricity fairly cheaply from homeowners, but also recognized the agreed rate was not as bad as it could have been.

Can I Sell my solar energy back to Georgia Power?

Customers connected to the grid with home solar systems in Georgia can sell their excess electricity back to Georgia Power for bill credits. Any excess solar energy generated in a month will carry over to the next month.

What is the solar buy back program?

The Solar Buy Back program offers the same credits regardless of the residential rate plan that you are enrolled with at 2024 Georgia Power Net Metering. All unused energy produced by your solar panels results in bill credits that carry over into the next month.

Should the Georgia Power buyback rate be set at the cost?

Many advocated for the buyback rate -- the rate that Georgia Power buys excess electricity -- to be set at the rate the utility charges customers to make the program more attractive. Others called for an expansion or extension of the pilot program from a few years ago where Georgia Power bought electricity at the Solar Avoided Energy cost rate.

Does Georgia Power pay for excess solar power?

Georgia Power does not pay customers the full retail rate for excess solar power sent back to the grid. Instead, they compensate customers at the avoided energy rate, which is equivalent to the amount that the utility would otherwise pay to buy the power on the open market.
