

What is Georgia Power's monthly net-metering program?

Georgia Power's monthly net-metering program was created in 2019 as part of the Public Service Commission (PSC) Rate Case, with the support of the Georgia Solar Energy Association. The program has a cap of 5,000 customers or 32 MW of capacity, whichever comes first.

Could Georgia's 'monthly net metering' program threaten solar jobs?

The rapid adoption of solar energy systems by Georgia home and business owners under Georgia Power's 'monthly net metering' program could threaten solar jobs in the state as it is about to grind to a halt.

Does Georgia Power have a net metering cap?

Georgia Power does not have a net metering cap, but the state of Georgia does cap the amount of solar that can subscribe to net metering at 0.2% of a utility's peak electricity demand from the previous year.

Does Georgia have a limit on solar net metering?

Georgia has a limit on solar net metering: the state caps the amount of solar at 0.2% of a utility's peak electricity demand from the previous year. There is also a cap on the size of solar systems that wish to sell their electricity back to Georgia Power.

How can I sign up for solar net metering?

To sign up for solar net metering, fill up a net metering application form. Once approved, the regional electricity board will replace your unidirectional meter with a bidirectional meter, which measures both export and import of electricity.

Does Georgia Power pay for excess solar power?

Georgia Power does not pay customers the full retail rate for excess solar power sent back to the grid. Instead, they compensate customers at the avoided energy rate, which is equivalent to the amount that the utility would otherwise pay to buy the power on the open market.

Georgia Power's current community solar program is unpopular, inefficient, and increases bills. The program proposed in the Georgia Homegrown Solar Act can reduce energy costs and provide a hedge against volatile fossil ...
