

What is the Go Power 30 amp digital Bluetooth® solar controller?

The Go Power! 30 Amp Digital Bluetooth® Solar Controller is an essential component of our RV solar charging solution. It helps protect and extend battery life by preventing overcharging once your batteries are 100% charged from your solar array. Our new solar controller incorporates several advanced features, including:

Is the 30 amp digital Bluetooth® solar controller Bluetooth-enabled?

Of course, the big news is that the new 30 Amp Digital Bluetooth® Solar Controller is Bluetooth-enabled, allowing you to manage the controller from our Go Power! Connect app. The Connect app lets you view all the essential information from your solar controller and the rest of your power system right from your Bluetooth® enabled device, including:

Does go power have Bluetooth® wireless technology?

Here at Go Power!, we're all about using technology to improve RV efficiency and the overall experience. That's why we've enhanced our most popular controller to include Bluetooth® Wireless Technology. The widespread adoption of sensor-based technology combined with mobile, smartphone applications has been a boon for homeowners.

How does a 30 amp solar controller work?

Turn your compatible Go Power! ISW Inverter on or off Our 30 Amp Digital Solar Controller features Maximum Power Boost Technology (MPBT). This allows you to override the normal charging algorithm of the solar controller to 'boost' the solar charge, which is ideal at the end of the daylight to ensure batteries are topped up for the evening.

What is a 30 amp single bank solar charge controller?

The 30 AMP Single Bank Solar Charge controller is coming SOON! It uses PWM technology and increases battery life by preventing over charging.

What is a solar controller?

A solar controller is an essential component of your photovoltaic (PV) system. The controller maintains the life of the battery by protecting it from overcharging. When your battery has reached a 100% state of charge, the controller prevents overcharging by limiting the current flowing into the batteries from your solar array.
