

Why does Heineken use solar power for brewing Sol?

Heineken uses solar power for brewing Sol to support its sustainable development strategy, Brewing a Better World. By directing this energy into the public power grid, the neighboring community also benefits. Heineken aims to increase the share of renewable energy in production to 70% by 2030.

Does Heineken South Africa have a solar power plant?

Read: Big changes planned for municipal electricity in South Africa Heineken South Africa launched a solar power plant at its Sedibeng, Midvaal brewery in Gauteng on Wednesday (26 October) - moving closer to reducing carbon emissions in all its operations.

How much energy does Heineken use?

The plant boasts 14,000 panels with an energy capacity of over 6.5MW providing 30% of the brewery's electricity demand. The 19-ha (190,000 square metre) project will generate 17,000MWh per annum. "This project supports Heineken's goal to reach net zero status in all its production sites by 2030.

Does Heineken have a sustainable brewing plant?

It is the latest move made by the company on its journey towards more sustainable brewing. "The newly installed solar plant follows a water reclamation plant unveiled at the same facility earlier this year," said Heineken's engineering, strategic projects and sustainability manager Richard Kriel.

Why is Sola partnering with Heineken?

"Sola is proud to be associated with Heineken and their commitment to procuring clean, low-carbon energy. Embedded generation projects right at the source of consumption help reduce the load on the electricity supply network without additional grid infrastructure upgrades," said Sola Group CEO Dom Wills.

Will Heineken reach net zero by 2030?

The 19-ha (190,000 square metre) project will generate 17,000MWh per annum. "This project supports Heineken's goal to reach net zero status in all its production sites by 2030. It is the latest move made by the company on its journey towards more sustainable brewing.
