

Where can I find charging stations?

ChargeFinder is available as an app for iOS and Android. Specific city pages provide a good overview of charging stations in a particular city. Download the app from Apple App Store or Google Play. ChargeFinder will eventually also be available as apps in Apple CarPlay, Android Auto, and Android Automotive.

What is the cost of charging an EV at home?

Charging an EV at home is substantially cheaper than using DC fast-charging, typically costing around one-third as much. On average, an EV charger has an up-front cost of between \$400 and \$500. You'll want to charge at home as much as possible for convenience and cost savings.

How do I find out if a charging station is nearby?

To find out if a charging station is nearby, use ChargeFinder's station page which shows relevant information like charging speed, outlet type, price, and location. Additionally, the "Food and Shopping Nearby" feature helps you find points of interest near the charging station.

Is ChargePoint compatible with a home Flex unit?

ChargePoint, one of the largest providers of public charging, integrates its Home Flex unit into the same app used for public units. This means you can use the same app to connect to both public and home charging units.

What are the main types of at-home EV chargers?

For at-home chargers, there are two main types to keep an eye out for: J1772 and Tesla's North American Charging Standard (NACS or J3400). Thankfully, adapters to switch between each connector type are easily available, so limiting your purchase to whatever connection your vehicle features isn't necessary.

What power level does a destination Charger offer?

Destination chargers usually provide an output of 3 kW to 22 kW. The color shades on the map indicate the power level: light orange for 3-7 kW and darkest orange for 22 kW. The most common are fast chargers, shown in dark blue, which provide 50 kW.
