

Does Honda have wind and solar vppas?

The wind and solar VPPAs are part of Honda's ongoing efforts to not only purchase renewable power but also to generate renewable power onsite at its North American operations. To date, Honda has installed 7.3 MW of renewable wind and solar power at its facilities across the region.

Will Honda get more solar power in 2021?

Then in fall of 2021, Honda will secure an additional 482,000 MWh/year from 200 MW of solar power generated from a Texas solar facility. Additional details of the Texas solar facility will be disclosed in 2020 when it is nearer to completion.

How much wind power does Honda use?

Starting in fall of 2020, Honda will purchase 530,000 MWh/year from 120 MW of wind power generated by the Boiling Springs Wind Farm in Oklahoma, a 150 MW development of the energy company E.ON. Then in fall of 2021, Honda will secure an additional 482,000 MWh/year from 200 MW of solar power generated from a Texas solar facility.

Does Honda have a wind farm?

"We are proud to work with Honda to provide 100% clean, renewable wind power from Boiling Springs Wind Farm for its North American manufacturing facilities," said Silvia Ortin, E.ON Chief Operating Officer North America.

How did Honda get its power from wind turbines?

Check out some of our latest innovations below. Honda became the first U.S. automaker to derive a significant amount of power from wind turbines on its own property when two turbines began operation at our transmission plant in Russells Point, Ohio. Click below for a video detailing the turbines' use at Honda.

Does Skye Renewables support Honda Philippines?

"Skye Renewables has always been committed to supporting the energy transition across Asia and we are delighted to help support Honda Philippines, Inc. in its sustainability journey," said Gary Espino, Head of Philippines for Skye Renewables.
