

# How do gas stations charge for electric cars

How do you charge an EV at a gas station?

While charging an EV is different from refueling your car at a gas station, expanding infrastructure means that EV charging has never been easier. The basic steps of recharging your EV at a public station are: Pull the car up to the charger. Turn the car off. Plug in a fuel-supply cord.

How can a gas station become a fast-charging EV station?

The easiest way to transition a gas station to a fast-charging EV station is to test the waters by replacing one fuel dispenser with an EV charging dispenser, causing the least disruption possible. To attract EV drivers, gas stations must offer ultrafast charging technology, faster than L3.

How do I find electric vehicle charging stations?

Google Maps also has an Electric Vehicle Charging category you can select. Each app shows the number, type, speed, and sometimes photos of each charging station location. Some apps have live data about which stations are available at that moment. Have a backup plan.

Can You Park an EV at a charging station?

Don't overstay your welcome. Charging stations are meant for charging, not for parking. In some states, you can be fined or towed for parking an EV at a charging station without actually charging. Make sure you charge efficiently and move to a normal parking space when you're finished charging. Keep your charging apps updated.

How does EV charging differ from a gas car?

Unlike gas cars, which can be filled using the same type of pump at any gas station, the EV charging landscape is a bit more complex. Charging cables and plugs differ by manufacturer and region, and charging on the go is often not a one-size-fits-all situation.

How do electric cars charge on the go?

Charging on the go is further simplified by way of many electric cars' in-dash navigation systems, which will typically suggest charging locations to stop at along your route should your EV need a charge in order to reach the final destination.
