

# How many public car charging stations are there in california

How many EV chargers are there in California?

The California Energy Commission (CEC) estimates about 120,000 gas nozzles in the state, compared to 178,000 public and shared private EV chargers. That includes more than 162,000 Level 2 and nearly 17,000 DC fast chargers, and that doesn't count the estimated 700,000-plus Level 2 chargers in single-family homes, according to the CEC.

How many eV ports are there in California?

In 2024, California boasted 178,500 total EV ports compared to around 120,000 estimated gas nozzles, according to the California Energy Commission. The number of accessible chargers across California has nearly doubled since 2022.

How many car chargers are there?

The commission estimates that more than 162,000 chargers are Level 2, which can provide roughly 14 to 35 miles of range per hour of charging, and nearly 17,000 are considered fast chargers -- which juice up a vehicle in minutes. Many hybrid vehicles are not equipped to work with fast chargers, however.

What is the difference between a charging station and a private Charger?

Private chargers are located at parking space (s) that are privately owned and operated, often dedicated for a specific driver or vehicle (for example, a charger installed in a garage of a single-family home). Charging Station is a physical address where one or more chargers are available for use.

Does California have more electric car chargers than gas nozzles?

Governor Gavin Newsom (D-CA), who made the announcement, said: As the federal government works to make it harder for you to charge your electric car, California is doing the opposite. We now have nearly 50% more chargers than gas nozzles in the state, meaning you have more options than ever to charge your vehicle.

What is a charging station?

Charging Station is a physical address where one or more chargers are available for use. A charging station can be public, shared private, or private. Level 1 chargers use alternating current electricity at 120 volts to provide about 5 miles or less of range per hour of charging.
